LCD Power

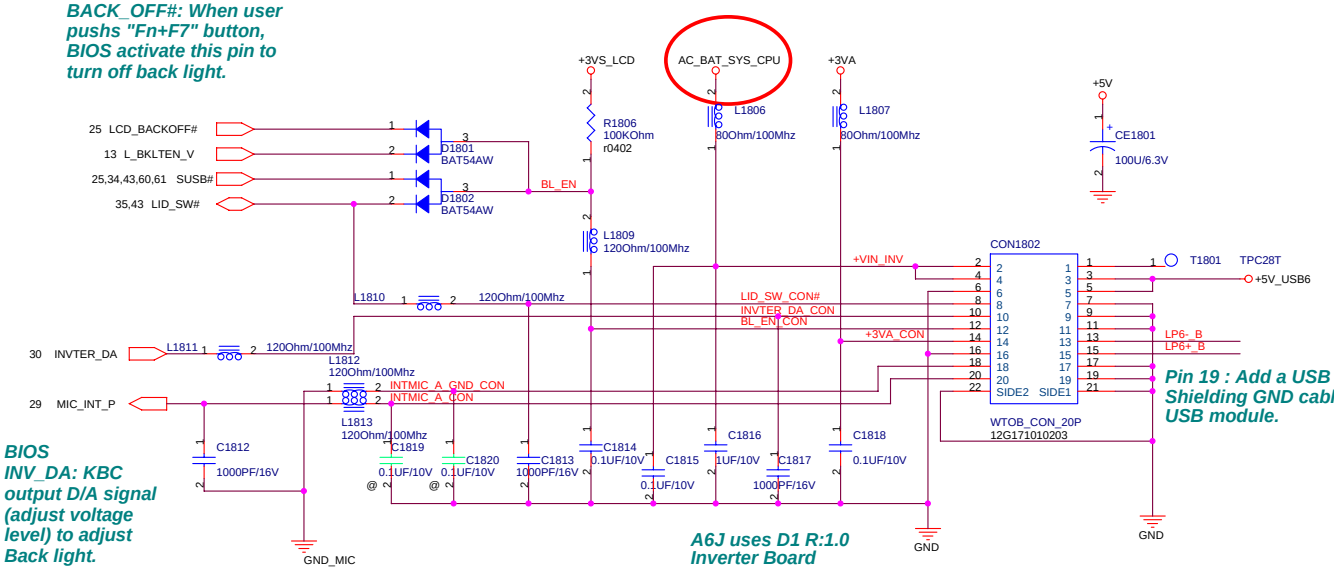

LCD LVDS Interface

Cable Requirement:
Impedence: 100 ohm +/- 10%
Length Mismatch <= 10 mils
Twisted Pair(Not Ribbon)
Maximum Length <= 16"

INVERTER Interface

BIOS
BACK_OFF#: When user pushs "Fn+F7" button, BIOS activate this pin to turn off back light.

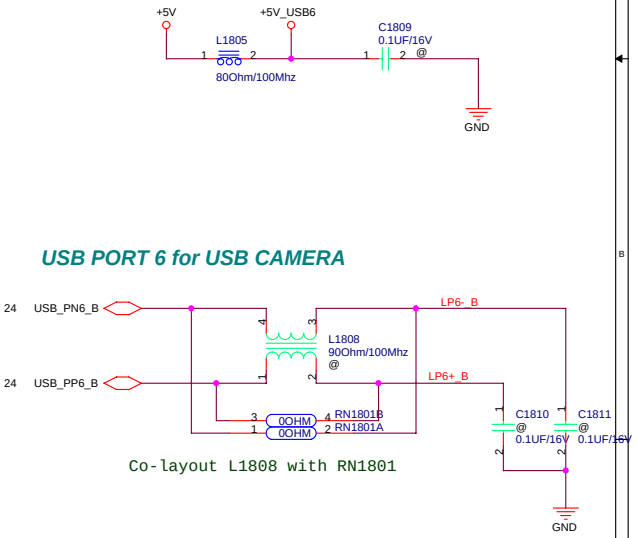

Pin 19 : Add a USB 2.0 Shielding GND cable to USB module.

A6J uses D1 R:1.0 Inverter Board

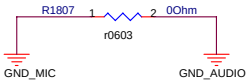

BIOS
INV_DA: KBC output D/A signal (adjust voltage level) to adjust Back light.

USB PORT 6 for USB CAMERA

Co-layout L1808 with RN1801

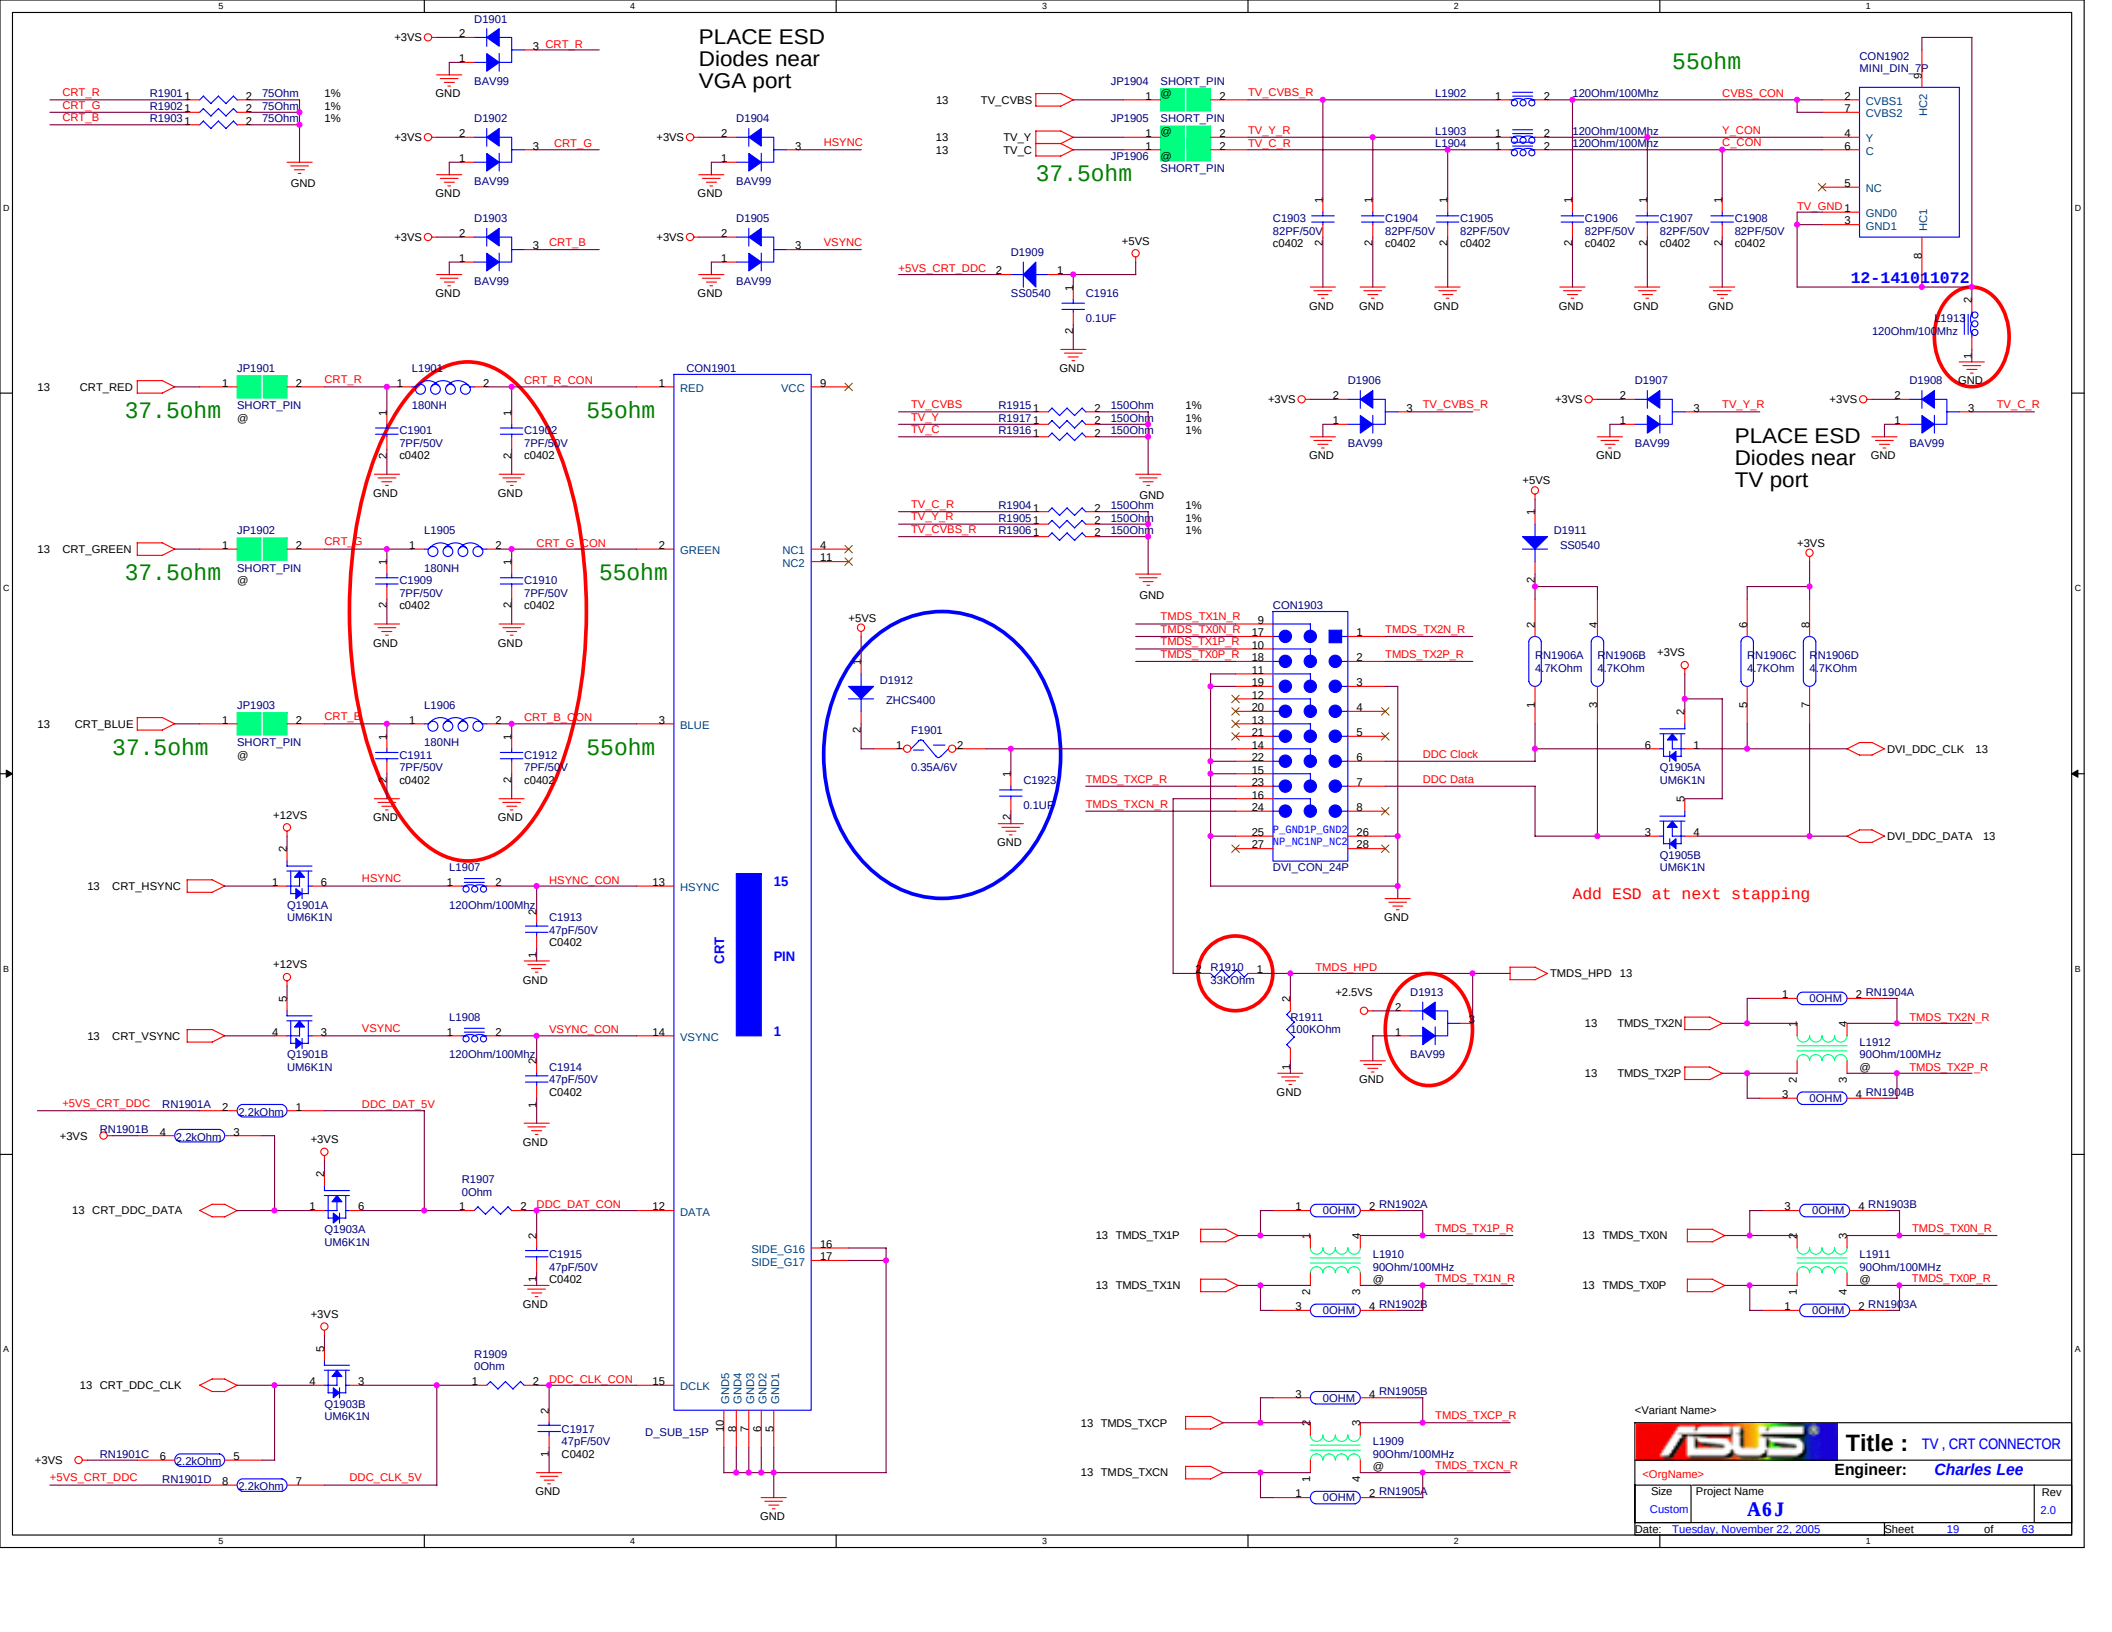

For EMI

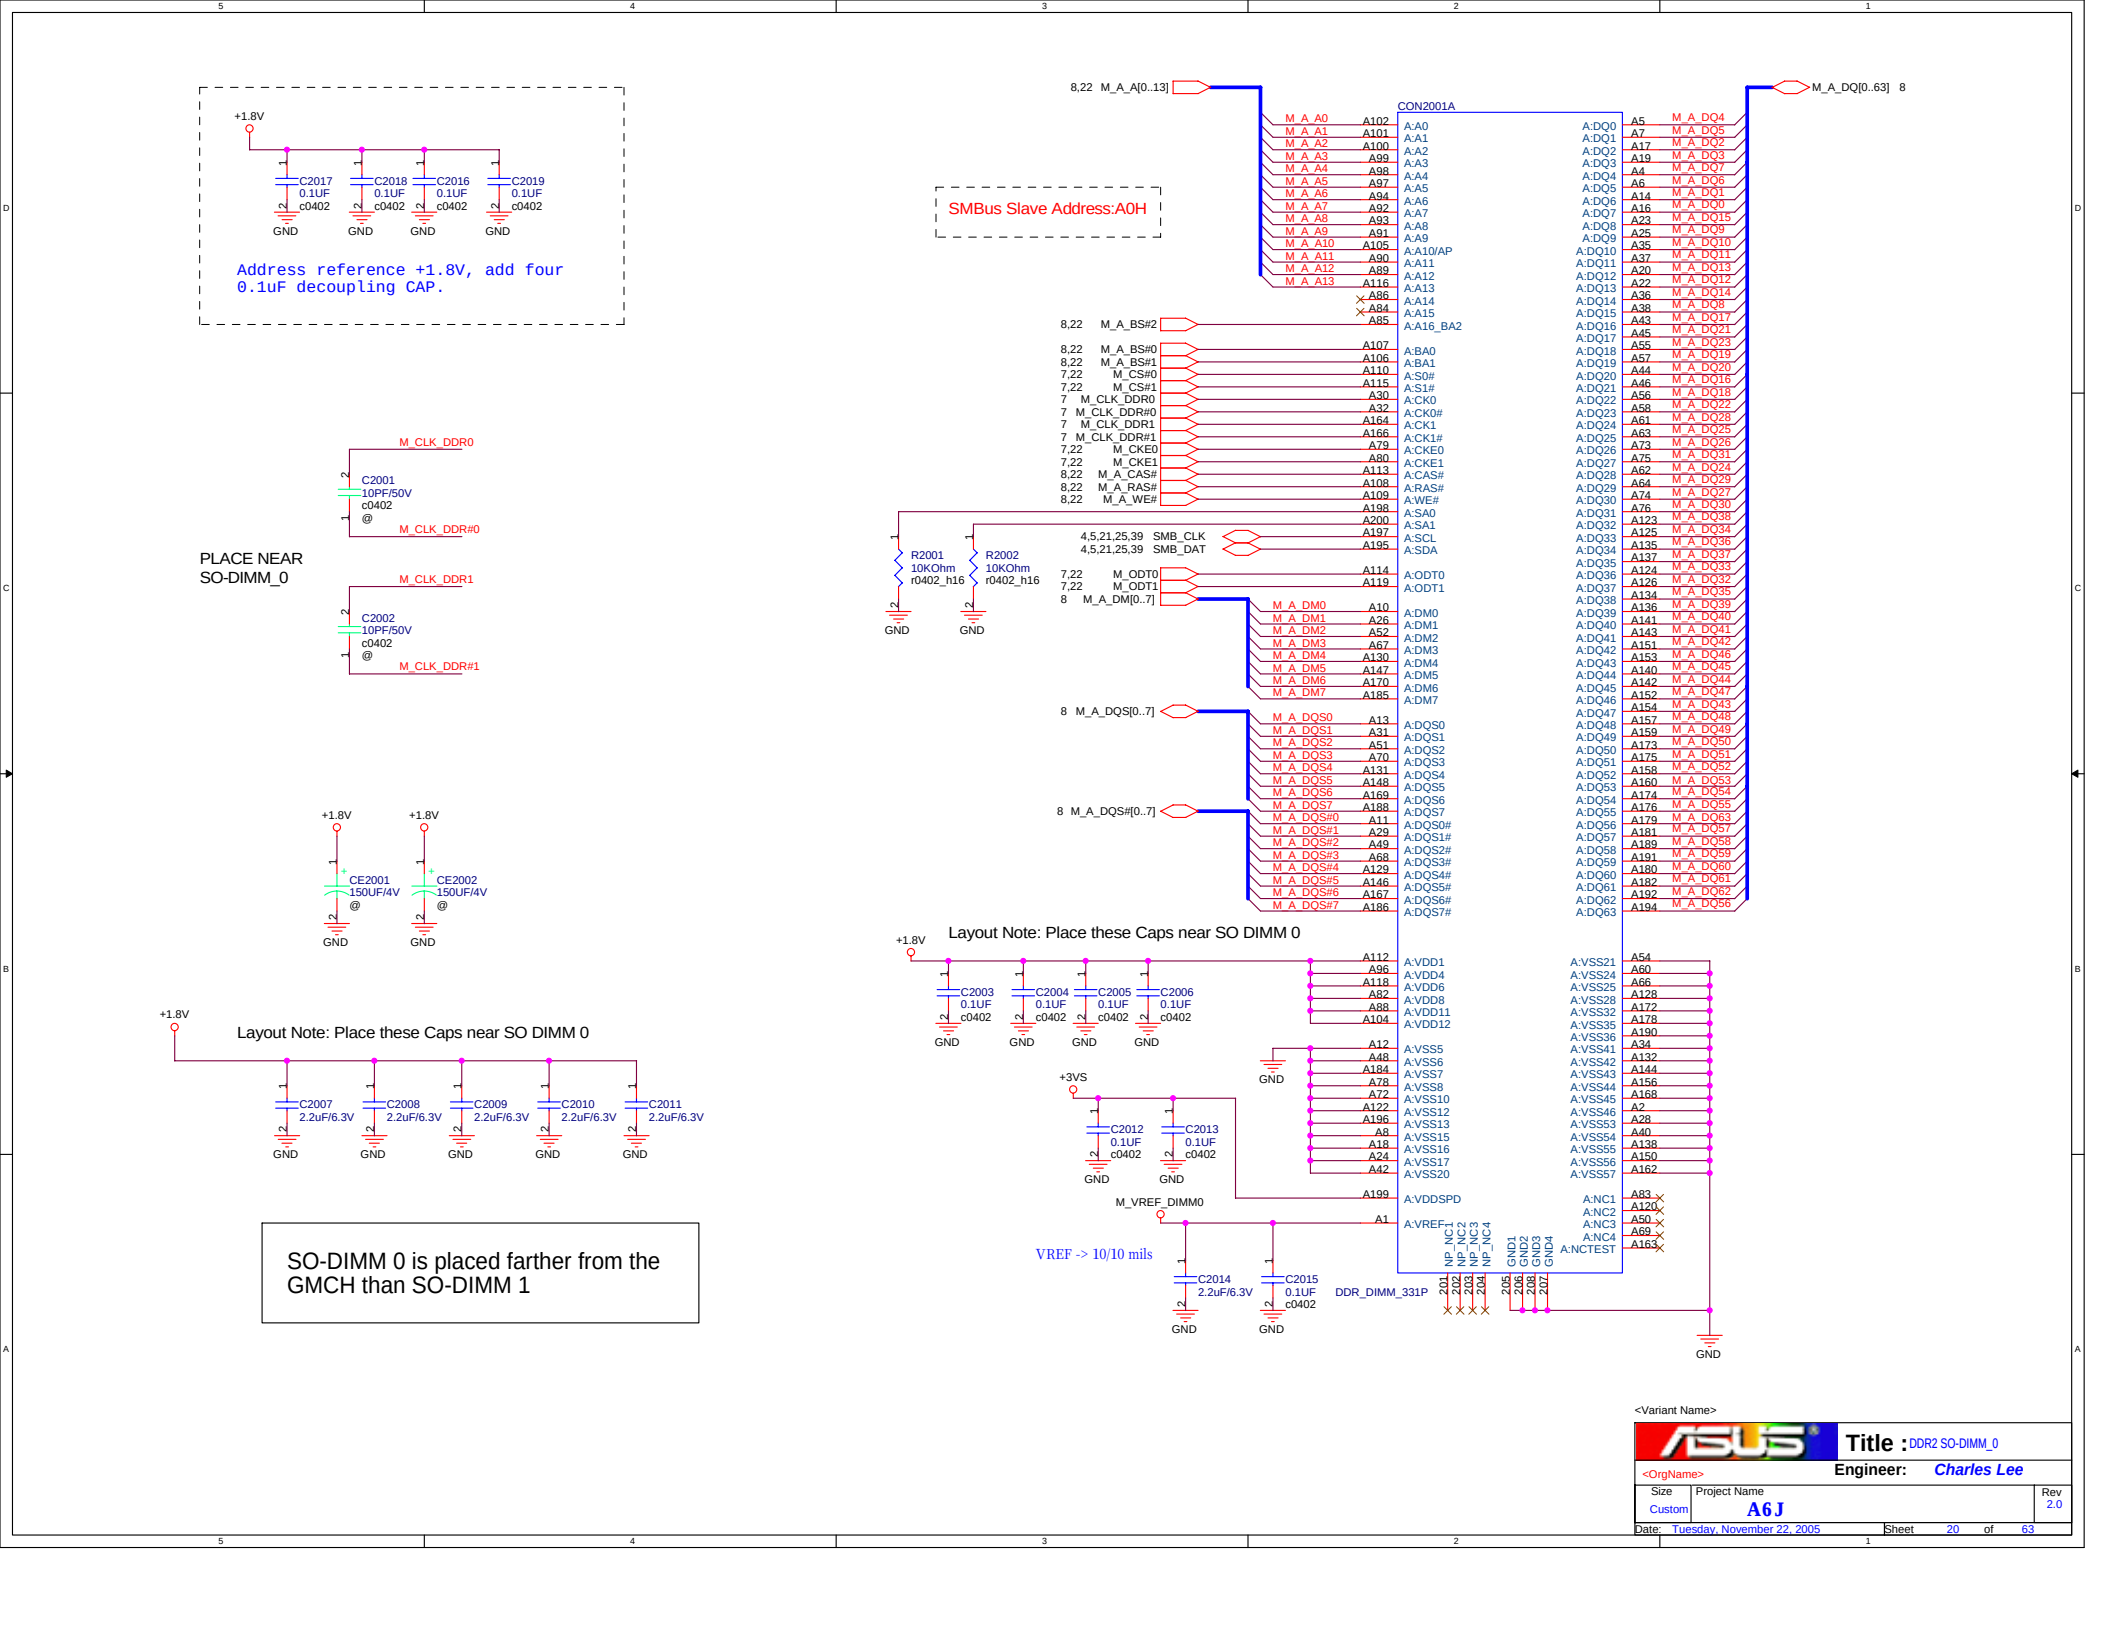

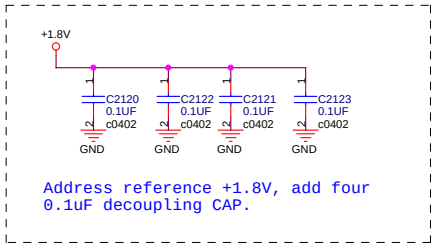

A6J doesn't support USB WLAN function!

ASUSTeK COMPUTER INC

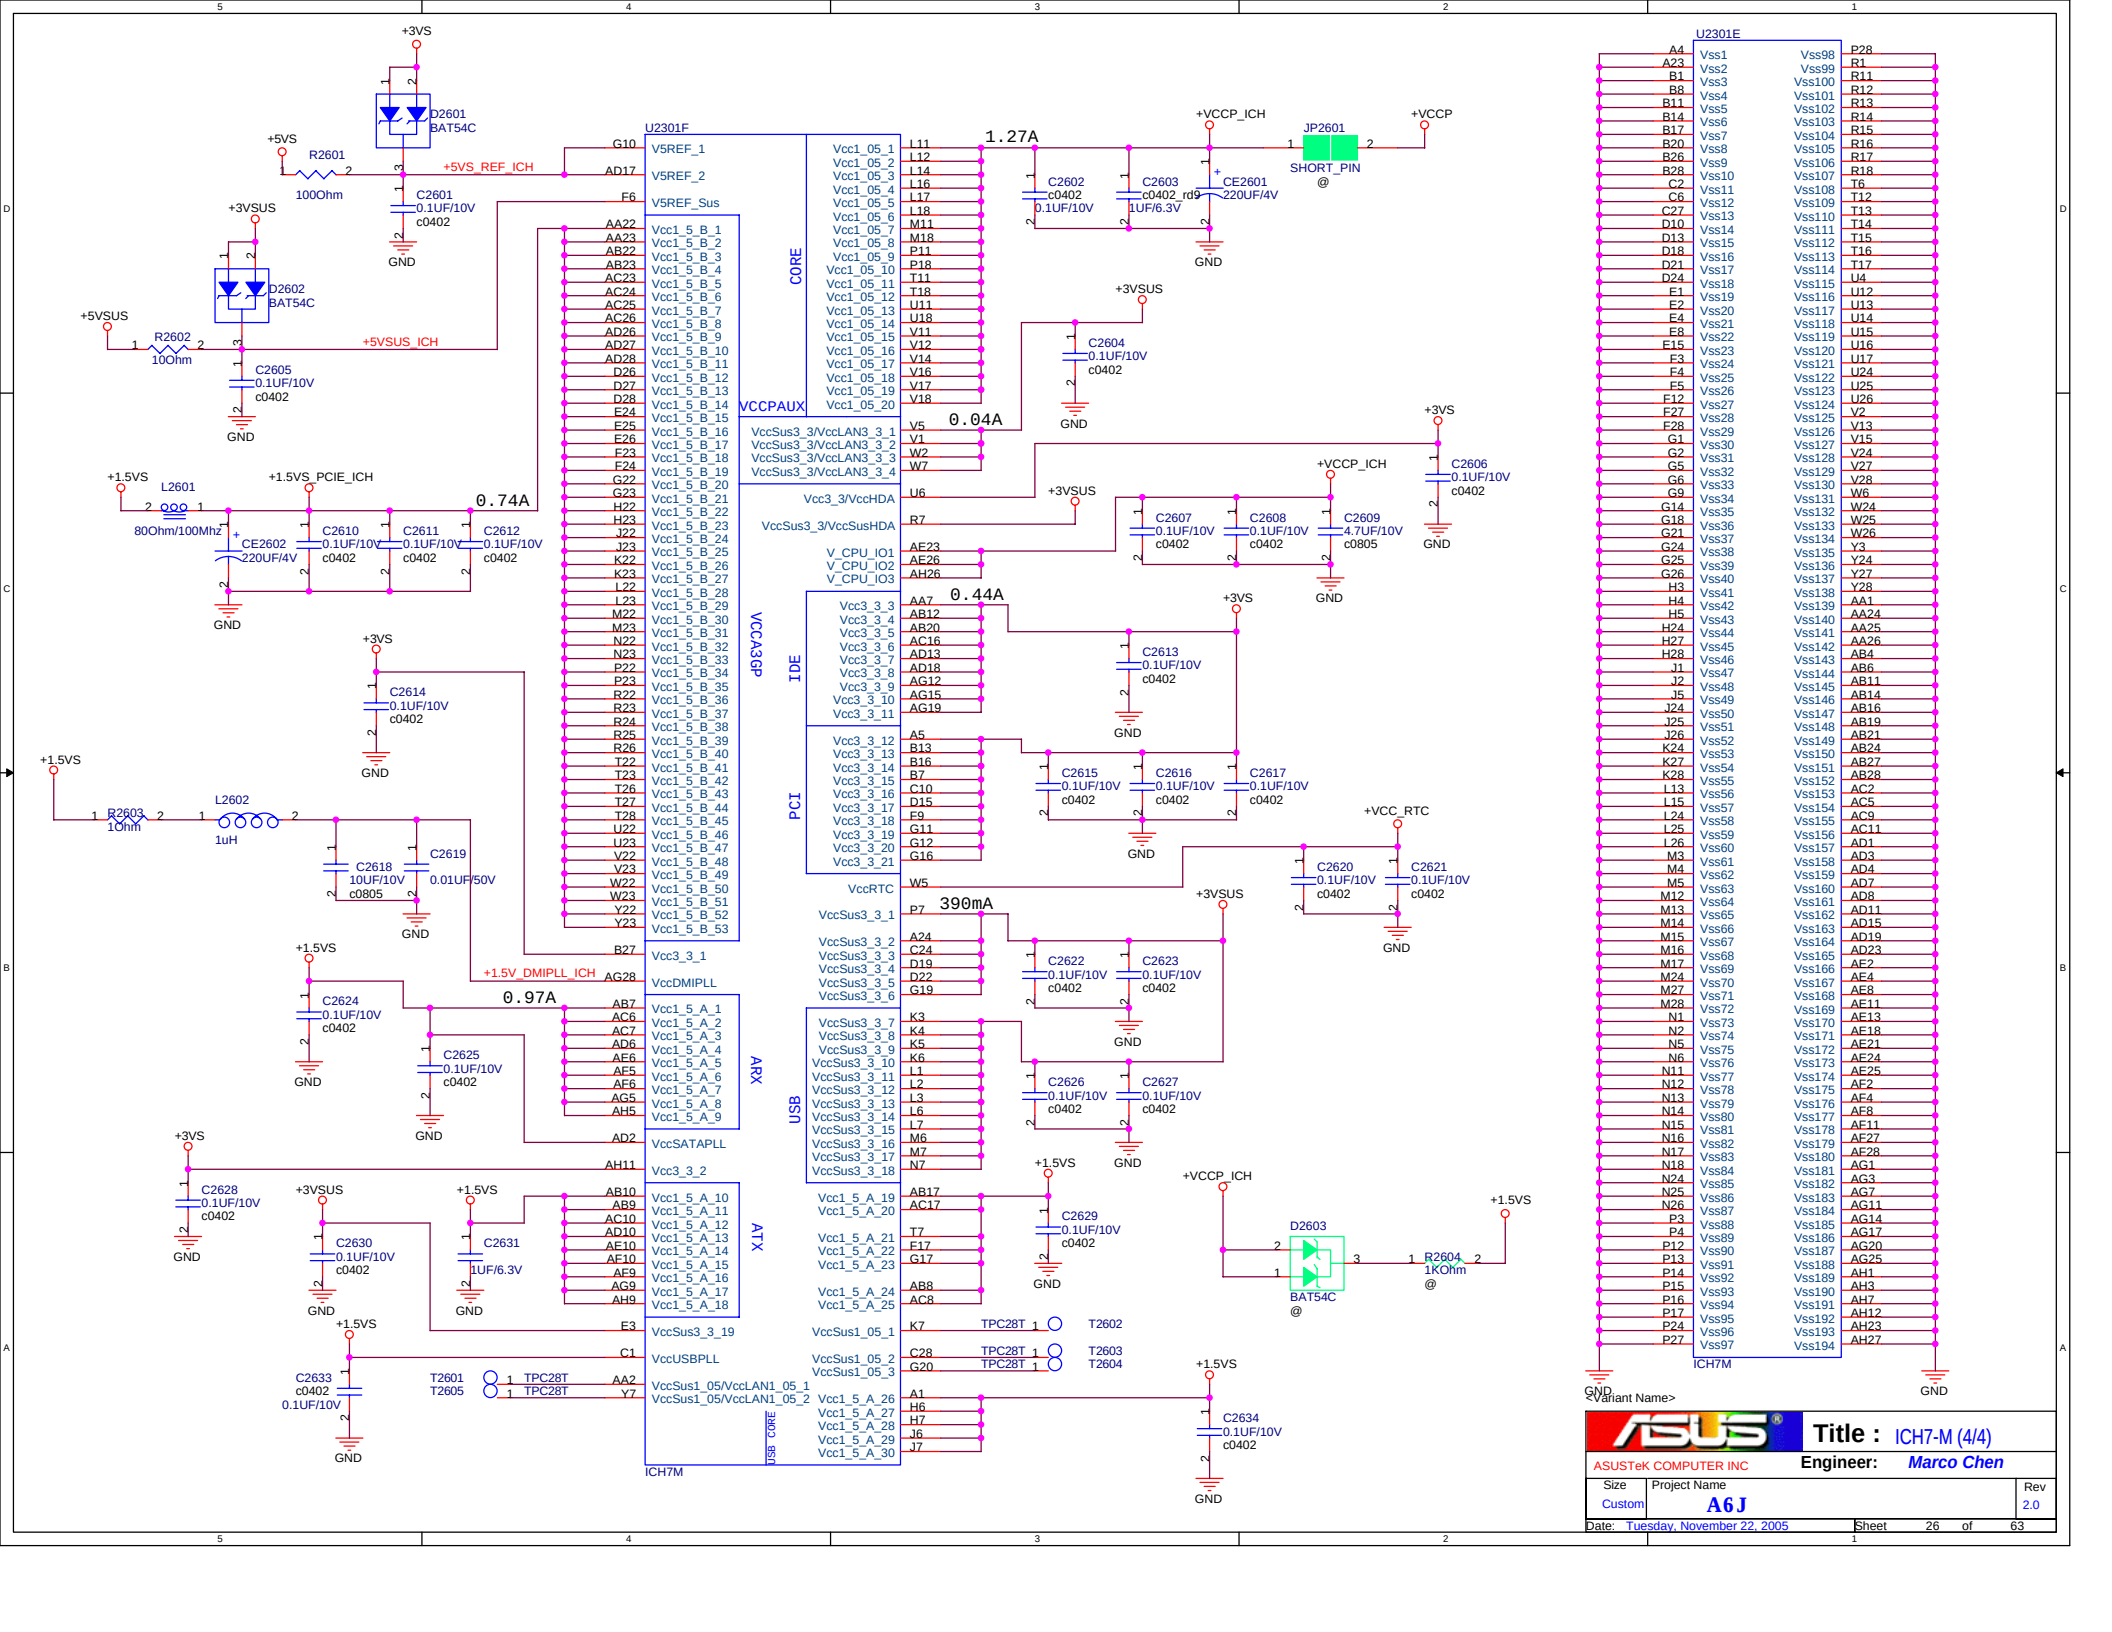

Engineer: Marco Chen

Size	Project Name	Rev
Custom	A6J	2.0

Date: Tuesday, November 22, 2005 Sheet 47 of 63

R1.0 -> R1.1

1. Page2: Add test points T215 and T216 for H_ADS# and H_CPURST#

2. Page4: Modify FAN solution from DA to PWM and change R-C delay timing.

   A. Mount R416 and DNI R415

   B. Change C404 to 1uF

3. Page4: Connect +3VS_FAN(R419*3.3K ohm and R420*2.2K ohm 分壓 from +V5S_FAN) to U401.3 because FAN_DA level is 3V and FAN_PWM# is open-drain, change pull-up to +3VS and U401.3 level shift from 5V to 3V

4. Page4: Add pull-down resister R418*10M ohm to protect noise when power-on

5. Page5: Add (R579*33 ohm and C529*10pF) for TPM PCI 33MHz clock

6. Page5: Change R531 from 10 ohm to 22ohm to eliminate swing.

7. Page5: DNI R510 to disable ITP enable.

8. Page7: Delete R715 because it duplicate with R529.

9. Page9: Change L905 to P/N:09G012030000 and L905 to P/N:09G013120409 because +1.5VS_PCIE consume about 1.3A and +1.5VS_3GPLL consume 200mA only.

10. Page13: VGA_GPIO5 add pull-up 10K ohm to +3VS for ATI recommendation.

11. Page13: DNI R1320 and mount R1321 to change back light enable from DC level to PWM and meet VBIOS support.

12. Page13: Add R1343*0 ohm for reserving bead to ground.

13. Page15: Change L1504.2 to connect from +VGA_VCORE to +1.2VSP for ATI recommendation.

14. Page15: Change bead L1506 from 120Ohm/100Mhz to 30Ohm/100Mhz type.

15. Page19: Add bead L1913 between TV_GND and GND.

16. Page23: Change High Definition damping resisters*R2312, R2314, R2316, R2318, R2320, R2322, R2324, R2325 from 22 ohm to 39 ohm for reducing reflection.

17. Page29: Add Line-in solution, please commt Black 2.

18. Page31, 32: Change LAN chip from Marvell 88E8053 to Realtek RTL8111B.

19. Page34: Add Q3401 and R3414 to replace U3402B.

20. Page34,35: Modify reset circuits to meet Intel specification, please commt Black 3.

21. Page35,43 : DNI R4312 and change R3509 from 4.7M ohm to 2.2 M ohm to short SWDJ_EN# detected to 2secends for BIOS requirement and add INIT# solution(please comment Block 7).

22. Page37: Change R3706 from 10K ohm to 100K ohm to enlarge R-C delay time.

23. Page39: Reserve R3905 to PLT_RSTNS# Wire-Or with PLT_RST#_BUF.

24. Page41: Short CON4101.1 and CON4101.2 and delete R4105, R4104, and C4103 because no timing issue between power and enable signal.

25. Page42: Delete D4201 and DNI R4202 because no power loss issue exist.

26. Page43: Modify S4 strech circuits, please comment Block 4.

27. Page44: Add TPM connecter.

28. Page45: Add C4508, C4509, R4506 and R4507 for EMI requirment.

29. Page42: Change CON4202.1 and CON4202.3 power from +3VSUS to +3V.

30. Page18: Change L1806.2 power from AC_BAT_SYS to AC_BAT_SYS_CPU for EMI requirement.

31. Page7: Change from VRM_PWRGD to ICH7_PWROK to enable MCH_PWROK for Intel requirement(Mount R721 and DNI R722).

32. Page23,34: Change thermal-trip solution.

   A. Mount R2315 and DNI R4507

   B. Remove the circuits.(please comment Block 5)

   C. Mount thermal protection circuits.(please comment Block 6)

33. Page5, 23, 37: Change capacitor values for TXC recommendations(C513,C514 from 33pF to 27pF, C2302, C2304 from 12pF to 22pF ,Change X3701 to 07G010S22450*30 ppm and C3725 and C3726 to 22pf).

34. Page15, 47: Add Back Bias circuits for ATI recommendations.

35. Page5, 23, 33: Add SATA circuits for OEM requirement.

36. Page12: Remove R1205 for ATI recommendations.

37. Page39: Reserve R-C to tune waveform quanlity.(R3906,R3907,C3911,C3912)

38. Page41: Reserve R4104, R4105, R4106 to modify enable blue tooth solution.

R1.1 -> R2.0

1. Page4, 34: Add power limit solution and change thermal protection solution.

   A. Add R421*0 ohm and connect to H_PROCHOT_S#

   B. DNI R417*0 ohm

   C. Add R422*0 ohm and connect to OVERTEMP# that is wire-or with FORCE_OFF#.

   D. DNI OTP solution.

2. Page15: Add BBIAS_CNTL pull-down resister R1508*10K ohm to GND.

3. Page19: Modify parts (D1912 and F1901).

4. Page24: Add 3 pcs decoupling CAPs(C2410, C2411, C2412) to short return path because PCI Bus(IN1) reference +1.8VS(Vcc).

5. Page25, 44: Add BT_LED solution to co-layout with Scroll Lock for Epson requirement.

6. Page27: Change R2704 from 0 ohm to 150 ohm.

7. Page27: Change R2707 from 47K ohm to 332K ohm.

8. Page27, 28: Add MUTE_POP# solution for Epson requirements. Please comment PR BlOCK 1.

9. Page30: Add LID switch solution.

   A. Change BAT_SEL# push-pull resister from +3V to GND.

   B. DNI Q3002*2N7002.

10. Page31: Change LAN chip reset signal from PLT_RSTNS# to PCI_RST#. (Mount R3107 and DNI R3106).

11. Page35: Change KBCRSM solution to connect to PM_PWRBTN# directly, please comment PR BLOCK 2.

12. Page36: Change CARDBUS chip reset signal from PLT_RST#_BUF to PLT_RST#. (Mount R3618 and DNI R3617).

13. Page39: Add WLAN_LED# pull-high resister R3908*100K ohm to solve LED was lighted when miniCARD was un-plug in.

<Variant Name>

Date: Tuesday, November 22, 2005	Sheet 48 of 63	

14. Page40: Remove L4003, L4005, L4007, L4008 for EMI requirement.

15. Page43: Mount R4301*100K ohm to avoid PWR_SW# is floating.

16. Page43: Mount R4327*10K ohm to fix DJ_LED light soon issue when power on.
