R1.0 -> R1.1

1. Page2: Add test points T215 and T216 for H_ADS# and H_CPURST#

2. Page4: Modify FAN solution from DA to PWM and change R-C delay timing.

   A. Mount R416 and DNI R415
   B. Change C404 to 1uF

3. Page4: Connect +3VS_FAN(R419*3.3K ohm and R420*2.2K ohm 分壓 from +V5S_FAN) to U401.3 because FAN_DA level is 3V and FAN_PWM# is open-drain, change pull-up to +3VS and U401.3 level shift from 5V to 3V

4. Page4: Add pull-down resister R418*10M ohm to protect noise when power-on

5. Page5: Add (R579*33 ohm and C529*10pF) for TPM PCI 33MHz clock

6. Page5: Change R531 from 10 ohm to 22ohm to eliminate swing.

7. Page5: DNI R510 to disable ITP enable.

8. Page7: Delete R715 because it duplicate with R529.

9. Page9: Change L905 to P/N:09G012030000 and L905 to P/N:09G013120409 because +1.5VS_PCIE consume about 1.3A and +1.5VS_3GPLL consume 200mA only.

10. Page13: VGA_GPIO5 add pull-up 10K ohm to +3VS for ATI recommendation.

11. Page13: DNI R1320 and mount R1321 to change back light enable from DC level to PWM and meet VBIOS support.

12. Page13: Add R1343*0 ohm for reserving bead to ground.

13. Page15: Change L1504.2 to connect from +VGA_VCORE to +1.2VSP for ATI recommendation.

14. Page15: Change bead L1506 from 120Ohm/100Mhz to 30Ohm/100Mhz type.

15. Page19: Add bead L1913 between TV_GND and GND.
